

Central Coast GIS User Group

6/11/2008

Minutes

Attendance: David Young, Eli Adam, Farhad Kazemi, Henry Lee, Khem So, Mitzi Brown, Neal Myers, Pat Clinton, Paul Robertson, Sandy Gruber, Tim O'Higgins

Presentation:

Pat gave an excellent presentation on planning aerial photo projects. The presentation focused on an excel project that accepts project parameters (overlap, sidelap, lens focal length, etc). The program will then call either an AML or VB script and produce shapefiles of the photo center points, photo footprint polygons, and projected file size. To do this, ArcObjects are called from excel. There will be an additional opportunity to see this presentation at the ESRI User Conference in the first week of August.

Business:

The next meeting is Wednesday, August 13th right after the ESRI User Conference. The location is TBA. The topic will be an overview, report, and discussion of the Conference.

Map Critiques:

The map critique included several poem/maps by Howard Horowitz and the earliest known map (a village from a cave painting).
